

# INFINAM® Photopolymere

## Gute Chemie connects INFINAM® Photopolymere from Evonik

Gute Chemie is based on good relationships. abcr is the official distribution and logistics partner for Evonik's new innovative INFINAM® photopolymers. We offer a supply adapted to the needs in research and development and production processes all over the world, flexibly available from our warehouse. abcr takes over the ordering and delivery responsibility for Evonik, around the globe.

abcr hereby takes another step towards becoming a competent supplier for materials in additive manufacturing (3D printing) and, in addition to fast delivery by our logistics experts, naturally also offers consulting and comprehensive documentation.

These unique materials are ready-to-use and suitable for common photopolymer 3D printing processes (VAT photopolymerization, VPP) such as stereolithography, SLA or direct light processing, DLP.

abcr is the official distributor for  
INFINAM® Photopolymere:

- INFINAM® ST 6100 L | AB577862
- INFINAM® TI 3100 L | AB577863
- INFINAM® RG 3101 L | AB577864

Available in black 1 kg bottles

The high-performance photopolymers have outstanding properties in the areas of toughness and impact strength, temperature resistance as well as in the area of high strength applications. The advantages of these products and the 3D printing process lie in a very detailed, precise and high-quality as well as fast printing results.

The application areas of the printed parts such as industrial components, automotive parts, parts for drones, design consumer goods, etc. are as versatile as your possibilities in additive manufacturing.

**High Strength Photopolymers**  
INFINAM® ST 6100 L | AB577862

INFINAM® ST 6100 L is another high-performance material from Evonik's photopolymer product family. This new ready-to-use formulation fills the material gap in high-strength materials for vat polymerization 3D printing technologies (SLA, DLP).

**Impact Resistant Photopolymers**  
INFINAM® TI 3100 L | AB577863

INFINAM® TI 3100 L is the first high-performance material from Evonik's photopolymer product family. It leads to high toughness and impact-resistant 3D parts.

**Rigid Photopolymers**  
INFINAM® RG 3101 L | AB577864

INFINAM® RG 3101 L is another specialty resin for use in SLA and DLP 3D printing technologies from Evonik's innovation hub in Singapore.
